FINESTRE D'AUTORE

*Windows
of your dreams*

Digital passport Window Identity

COMETAL was established in 1981 as a craft industry that produced first aluminium frames for a small geographical market, then, due to the high demand, the company expanded its productive spaces. In 2005 COMETAL opened its new 8000 sqm production base that is fully computerized in the production process by enhancing the automated production lines.

The entire production system combines the technological precision and the human flexibility so as to create a specific product with high quality aesthetic finishes.

Flexibility has always been our assumption. We want that the industrialization, that is the basic prerequisite for improving, it adapts to our needs and not viceversa. This great effort has allowed us to distinguish ourselves for the wide range of products and for the wide scale of potential creations.

COMETAL HAS OBTAINED MANY QUALITY CERTIFICATIONS IN WITNESS TO ITS GREAT QUALITY.

The wide range

PVC windows

PVC is the most innovative material in the sector of window frames especially for the residential use.

The main benefits of this kind of window frames are the high THERMAL and ACOUSTIC insulation and the lack of routine maintenance

ALUMINIUM windows

The aluminium window is light and stable and gives great comfort performance in many ways. It is very ductile and enables the realization of many different compositions.

It is fireproof and combined with specific tools it can prevent break-in.

ALUMINUM shutters

COMETAL offers an incomparable wide range of styles, from "Venetian" to "Historical" shutters, from "Genoese" to "Florentine" shutters.

These shutters are easily maintained and because of that they are good for every kind of front.

They are beautiful, well-rounded and also efficient and strong to protect the houses from climate events and from pollution.

Our products are made using high quality materials, high-tech machines and with the help of high qualified craftsmanship.

Think Eco

Energy saving: the best source of energy

The best way to use the Energy in a rational way is to avoid unnecessary waste of Energy. Thanks to Cometal window frames it is possible to significantly reduce the heating costs and the environmental impact: a real investment that, due to the savings made, it is paid back in a short time and adds value and comfort to your house.

Environment-friendliness: a convenient philosophy

All Cometal window frames are made with totally recyclable materials and can be re-used to produce a wide range of artifacts. Furthermore the production processes have a very low environmental impact. For this reason a Cometal window is a doubly responsible choice from the point of view of environmental protection
